Title of Micro-Project
<u>To study the concept of integration and solve the problems upon it.</u>

1.0   Rationale

Website design is a broad term that encompasses a wide variety of task, all involved in the
formation of web pages. There are essentially two types of web design approaches which
are dynamic and static design. Static web design is typically based on basic HTML code. It
is essential for diploma student to learn HTML since the task of static website design is
performed by using HTML coding. This course introduces web page design using HTML5
and also gives emphasis on learning Cascading Style Sheet (CSS) which is style sheet
language used for describing the presentation of document written in markup language for
formatting and styling of content. It will also helpful for learning in Applet of java. This
learning enables students to design static websites and host it on Internet/Intranet.
